Coding Challenge Platforms

These platforms provide an environment to practice our coding skills, improve our knowledge and serve as a tool for show the recruiters our technical abilities.

Between all the platforms I choose CodinGame because it is a gamification of all the other knowledge offer by the rest of the platforms.

HTML/CSS/JavaScript templates

Templates are the best way to complete a task without spend more time than needed in the design. It will serve as an inspiration, or it could save you a lot of time to spend in other parts of a project.

I choose Free Admin Templates because their templates are highly customizable Free & Open Source.

Freelancing platforms

This platforms are really useful to find clients who need our specific services.

I choose People per Hour because I have used it in the past and it was a good experience.
